

Live Score - Digital Sports Scoreboards

23. Jan 2016

TV and Web Scoreboards for sports teams and broadcasters!

Live Score is a complete ecosystem for your game scoreboard and live experience. It creates score bugs and graphics for live streams and tv broadcasts, web widgets for your websites and other different outputs formats.

This worldwide unique system is made for teams and individuals who want to provide amazing live experiences for their fans, as well as for professionals who need to produce high quality broadcasts.

Setup your very own scoreboard for 9 different sport types and use your favourite mobile device to control it on your own, or with the help of your team.

Every change you make will be published immediately on tv, in your live stream, as well as on all websites, apps, and whatever you have connected to your Live Score system.

The Built-In Sports Controls and iPad / iPhone versions provide separate and unique control layouts for every supported sport. These layouts have been optimised to provide a fast and efficient way to control your scoreboards.

See every detail and piece of relevant information to score a smooth and flawless game.

All mobile layouts come with 2 skins - the standard live.score theme and the PRO theme, so you'll always be able to use it, no matter how bright the sun will be on your game day.

The system combines scoreboards, mobile remote controls, and the ability to publish your game progress on many different platforms.

Live Score is used by companies, teams and individuals around the world.

It's taken part in productions and events for MiLB.tv, Rugby Super League, ITM Cup, Baseball European Championships, Pokemon Arena Cup and more.

The Standard Edition of Live Score is available for free at <http://www.live-score-app.com>.
